

Smart Security Antivirus/Antispyware/Firewall/Antispam - ESET

- The Internet is a wonderful place for networking, searching for information and entertainment, but it is also where malicious software, phishing attacks and other threats lurk. ESET Smart Security keeps your PC safe with advanced proactive detection that blocks most known and undiscovered threats hours or days faster than other Internet security technologies. Built on the award winning NOD32 antivirus and antispyware engine, ESET Smart Security stops most new threats proactively, well before other vendors have issued a signature, maximizing your defense against new and unknown threats. Free 30 day trials are available for you to test in your environment.

Security Information and Event Management (SIEM 2.0) - LOGRHYTHM

- LogRhythm provides a comprehensive, fully integrated, enterprise-class log management, log analysis and event management solution that empowers organizations to comply with regulations, secure their networks and optimize IT operations. By automating the collection, organization, analysis, archival and recovery of all log data, LogRhythm enables enterprises to easily comply with log data retention regulations while simultaneously gaining valuable, timely and actionable insights into security, availability, performance and audit issues within their infrastructure. LogRhythm solutions are noted for their completeness, useful analytics, ease of use and rapid time to value.

Encryption and Device Control on Desktop and Laptop PCs and Macintosh - SAFEND

- Integrated device control and encryption. The Safend Solution Suite is made up of the following:
 - Auditor: Identifies endpoint vulnerabilities by monitoring port and device activity.
 - Discoverer: Maps and locates sensitive data stored on organizational endpoints and network shares.
 - Inspector: Inspects, classifies and blocks leakage of sensitive data across multiple channels.
 - Encryptor: Protects against data loss by providing PC and laptop hard disk encryption.
 - Protector: Guards against data breaches by applying granular security policies over physical/wireless ports and removable storage, allowing encryption of removable media.
 - Reporter: Provides visibility into removable device usage and policy enforcement.

Data Loss Prevention - PALISADE SYSTEMS

- PacketSure provides comprehensive Data Loss Prevention (DLP) and protects sensitive data leaving your network without disrupting business processes. This DLP solution keeps your employees, partners, contractors and hackers from sending sensitive and proprietary data off of your company network, whether accidentally or maliciously. PacketSure helps your organization comply with regulations such as HIPAA, GLBA and Sarbanes-Oxley (SOX) and is up and running in less than 30 minutes. See why hundreds of companies have chosen Palisade Systems' PacketSure to protect sensitive and proprietary data. A free 7 day assessment is available for your organization's environment.

Encrypted Removable Storage - MXI SECURITY

- MXI devices and solutions enable employees to carry data securely wherever they travel in the world. By combining the power of strong user authentication, data encryption, and portable digital identities, our innovative solutions provide the highest level of protection available against theft or loss of confidential information, data and systems.

Enterprise Data Security Management - PROTEGRITY

- Providing enterprise software and solutions that help customers protect data and manage data security across technology platforms in their widely distributed organizations. We provide safety from the moment data is acquired until the moment it is deleted. Regardless of whether your data is in use, at rest, in databases, files, folders, applications, or storage, Protegrity has a solution to protect it. That solution extends across databases and operating systems to provide the coverage needed in today's diverse technology environments. It also spans structured and unstructured data so records like images, audit logs, and voice recordings are as easy to safeguard as columns of data.

Clientless Endpoint Security and Power Management - PROMISEC

- Lightweight clientless endpoint management software. Spectator delivers accurate, real-time intelligence on endpoints and servers and remediates threats that are missed at the network gateway level. A white and black list approach inspects for any new unknown or missing objects. Spectator can target individual computers, groups of computers, subnets or an entire network. Spectator identifies applications, devices, processes, services, start-up commands, toolbars, files, hot fixes, service packs, licenses, registry values and client availability. Power management capabilities for endpoints can save \$2 to \$3 for each \$1 spent on Promisec Spectator in the first year, and can save \$10 to \$15 for each \$1 spent every year after that. Typical payback is 6 to 8 months. Call for your free assessment today.

Strategic Data-Centric Security Solution to Reduce File Size and Enhance Performance - PKWARE

- More than two decades ago, PKWARE revolutionized data compression with the invention of the ZIP standard. Today, through continuous innovation and development, the PKWARE Solution is the only system that offers complete data container portability for managing, storing and securing data across the extended enterprise, both internally and externally, from mainframes to desktops.

Identity and Access Management - INDIGO IDENTITYWARE

- Indigo distinguishes itself by offering the first and only behavioral enterprise single sign-on with integrated strong authentication. Indigo's flexible design supports multiple strong authentication methods, including next generation biometrics, providing users with secure and fast access to information. Indigo knows exactly who you are, knows the way you work, and works the way you want it to. It increases workflow productivity while helping customers ensure regulatory compliance. The software-only solution is cost-effective and deploys quickly with its unique, lightweight "snap-in" design. No expensive hardware, third party licenses, or resource-intensive implementation costs are required. No other product offers the capabilities, flexibility and value that Indigo provides to organizations of any size.

Centrally Managed Database and File Encryption - VORMETRIC

- Centrally managed, high performance database and file encryption solution which manages data security across the distributed enterprise. Vormetric Data Security deploys rapidly and provides a strong combination of encryption, access control, key management, and data access audit logging for server files and databases running under the Windows, UNIX, and Linux operating systems. Other point solutions can take months to deploy, drastically reduce performance, only address a "column" of data security or lack the ability to deploy into a distributed environment. Vormetric solves these challenges through a lightweight architecture built upon their high performance technology foundation.

Data Protection and Storage - CTERA

- CTERA's Cloud Attached Storage is a solution for today's increasingly diverse storage and data protection requirements. It offers an all-in-one solution for SMBs and enterprise branch offices, enabling them to manage business-critical data efficiently: Automating data backup and recovery for everything from laptops to workstations to servers, facilitating file-based collaboration and improving business continuity, while reducing capital expenditure and running costs. CTERA's managed storage appliances combine Network Attached Storage (NAS) file sharing interfaces with cloud-based services in one seamless hybrid package. Key advantages include:
 - . Complete, secure dual backup (on-premises & off-site)
 - . Fully automated and managed solution
 - . Scalable from branch offices to mid-sized businesses and distributed enterprises

Zero-Client PC Replacement Technology - PANO LOGIC

- Pano Logic is a PC replacement, Zero-Client technology that works with VMWare, Microsoft Virtualization or Citrix desktop VDI sessions on servers running in the corporate data center. Pano Logic's Zero-Client devices replace the PC at the desktop, and save up to 95% of the power usage of PCs. Since the Pano Logic Zero-Client devices do not run an operating system, they do not need "technology refresh" (replacement) or "O/S refresh" (O/S upgrades) as do normal PCs.

Exchange and Blackberry System Monitoring - ENOW

- The award-winning ENow Mailscape is a complete systems management solution that provides Exchange monitoring and reporting, plus BlackBerry and ActiveSync management. Mailscape helps companies ensure a smooth migration to Exchange 2010, streamlines daily IT tasks associated with e-mail system administration, and offers over 200 reports, including mobile device usage along with a sleek dashboard view of entire Exchange system. Exchange 2003, 2007 and 2010 are all supported by ENow's Mailscape.
